`window.addEvent('domready', function(){ var Tips4 = new Tips($('.Tips4'), { className: 'tut-tool', showDelay: 100, hideDelay: 1750, fixed: true }); });` RokAjaxSearch is a truly powerful module that brings fantastic search functionality to Joomla, using the powerful and versatile javascript library, Mootools as well as full Google Search integration.

RokAjaxSearch offers AJAX powered real time search results for both your Joomla site content as well Google Search. There are various configuration options and parameters allowing you to enable not only Google web search, but Google Blog search, Google Image search, and Google Video search. In order to use the Google API functions (i.e. the ability to use Google search in your site for local and external searches), you must register your own API Key. Please see <http://code.google.com/apis/ajaxsearch/signup.html>. This in turn, must be entered in the API Key field in the module params, as shown in the diagram below.

[More Information](#)

How do I configure RokAjaxSearch?

We will take a quick look at the parameters you will find when you install this module. There are 4 columns, parameters, options, demo and description. The parameter column lists each available setting for the module; options lists the available options to choose from; demo lists the options chosen on the demo and description outlines what the module does. **Parameter**
